

Protecting people from crypto scams

White Paper

1. Introduction to the project

SCAM is the first project in the DeFi world that aims to create an audit platform capable of certifying projects by rewarding them with NFT tokens as a certificate.

The main goal of this platform is to give everyone, even the newbies, a platform where you can find safe projects to invest in, thus trying to avoid rugpulls and other scam methods.

SCAM will present itself as a dashboard where you can filter certified projects and find the most suitable projects for your investment.

There will also be a section where you will find a collection of new proposals for both legit and scam projects.

Around the platform we will subsequently implement new features on the certified projects, such as: SCAM Rocket Bot, Presale platform and even a SCAM Swap.

2. Backstory

How was this project born?

Everything started when our dev Enthusiasm got scammed. Scammed so hard that he lost literally all of his life savings. From that time we started joking about how things went for him. Enthusiasm itself started to joke about it. And one day, drinking some coffee on our work break, we joked about creating something called SCAM Token.

There were no plans or reasons to make it happen, but as jokes kept happening everyday, our mind was starting to get used to the idea.

So we've started talking about actually doing it. We wanted to create something with a good purpose, something to invest money safely, without having to worry about being scammed. And slowly, day by day, the SCAM Token project became a thing.

3. Technical Chapter

3.1. Stage 1 - Develop an NFT (ERC-721) & use it as a Certificate.

The NFT acts as a certificate for a project, whether it's a scam or not.

NFT will be transferred to other token's smart contracts.

NFTs are non-removable and visible on BSCScan.

There will be two different NFTs, respectively showing up on BSCScan as:

“Legit Project”

or

“Scam Project”

3.2. Stage 2 - Create a website to view the deployed NFTs

The main goal of this platform is to give everyone the possibility to find safe projects to invest in, thus trying to avoid rugpulls and other scam methods.

SCAM website will present itself as a dashboard where you can filter certified projects and find the most suitable projects for your investment.

Moreover, deployed NFTs will be visible as artistic creations dedicated to Legit Project.

There will be the counterpart related to scam projects as well.

3.3. Stage 3 - Create an audit method for new project to analyse them

- Check of smart contract
- Check of developer identities whenever it's possible
- Check of the use-case scenario and durability of the project
- Check social media and community channels (bots, real people, shillers, etc)

We will need to expand our team to work on it.

4. Roadmap

4.1. Q1 - Launch Phase

- Presale
- Launch on PancakeSwap
- Raise a community
- Start most common social platforms (Twitter, Discord, Stocktwits)
- Official subreddit

4.2. Q2 - Build-up Phase

- Expand team
- Start marketing campaign
- Revamp website to add functionality
- Listing CG and CMC
- SCAM Rocket
- NFTs platform beta
- CEX listing

4.3. Q3 - Game-changer Phase

- Further team expand
- Start auditing projects with our NFT
- Release a full functionality website
- Start SCAM merchandise
- Improve channels communication
- Large scale marketing campaigns

4.4. Q4 - Consolidation Phase

- Consolidate Branding
- Automation & Optimization
- Improve & Expand auditing processes
- Crypto Scam Market disruption
- Presale platform
- SCAMSwap

5. Why Buy

Buying SCAM will ensure you have invested your money in a true project, not in yet another SAFE-SOMETHING token with no real purpose whatsoever.

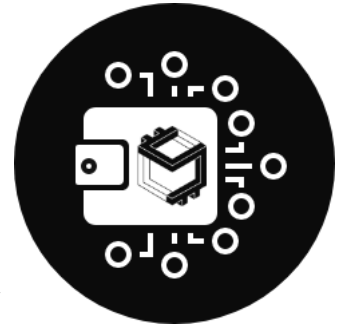

Moreover, by HODL-ing you'll make money doing pretty much nothing thanks to the fact that each buy or sell transaction takes 10% away and splits it among the holders.

The team is working endlessly on this project that has the potential of fighting all new scams in this really fast moving world. We have already shown our skills and involvement in our website (fastest bug fixes after community report), the creation of a Scam Rocket channel (why should we pay for something we could build ourselves?), rebranding etc. You will keep seeing this along the journey.

We are not looking to pump this token's price without having done our work first.

We went from nearly 100 people to more than 1400 people in just two weeks after launch.

All of our success so far has been possible thanks to all the people who are hodl-ing and believing in our Project.

6. Tokenomics

SCAM is a deflationary, frictionless farm Token.

Initial supply:	1,000,000,000,000,000 SCAM
Presale allocation:	400,000,000,000,000 SCAM
Burned at launch:	250,000,000,000,000 SCAM
Pancakeswap (locked):	250,000,000,000,000 SCAM
Dev Wallet (70% locked):	100,000,000,000,000 SCAM

SCAM has a redistribution system:

- 10% Fee that is automatically redistributed to each holder (burned token address included)
- 2% Fee that is automatically locked to liquidity

Dev wallet is locked for 5 Months. 20% of locked tokens inside will be released each month from launch. About those token, we will decide what to do with community (airdrop, using for contest, etc)

7. Community

We are encouraging new talented people to join our community. Working with people who got scammed offers lots of experiences and give us the opportunity to think about new ways to move the project forward.

Our numbers are growing day after day as more people are getting tired of being SCAMMED!

Everyone is important in our community, and if you have any questions our team is always happy to help.
